# What is token gating?

Token gating is a new way to restrict access to online content and physical locations by using an NFT. Tokens act like keys stored in the user's crypto wallet and grant the access.

# Community owners can now get paid in USDC while being able to receive payments with Apple Pay, Credit Cards, Google Pay, and Crypto

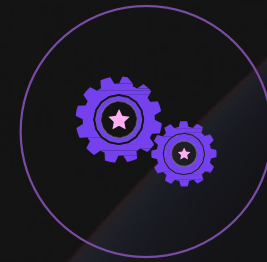

The funds are paid out instantly

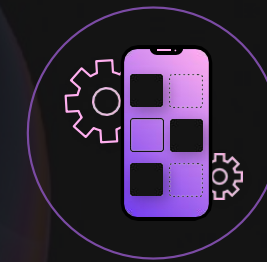

No bank account needed

No crypto knowledge needed

Customizable loyalty programs & engagement tools

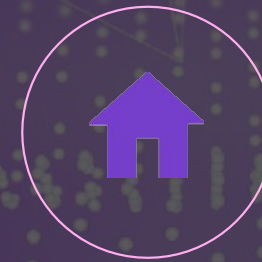

Whitelabel/branded Apps & APIs available

# Upcoming features

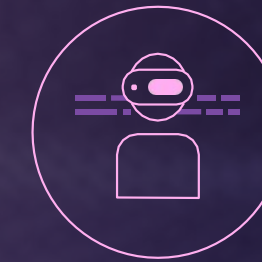

## Telegram/WhatsApp integrations

Access paid chats and streams with a token

## Apple Home/smart lock integrations

Open doors by tapping your phone on the lock

## AI Concierge

Loyalty rewards, member analytics and retargeting

# Business model

## 2% of sales and royalties

we charge 2% of sales for crypto purchases, with passthrough charges for credit cards

we charge 2% from every ticket resale if the event organizer enables royalties

## Upsale through advertising model

Online ticketing sector

# Our advantage

One click onboarding  
with wallet creation

The only app on the Appstore  
that can mint and create smart  
contracts

Independently audited by  
Hacken (100/100)

Accepts any payment  
method

Built-in tools to manage and  
promote sales

# Team

## Jay Jideliov

serial entrepreneur and angel investor, founder of Callision.com (Enterprise telco SaaS with customers in 70 countries), and former CTO of National Debt Relief (4500 employees). Prior to that, working at Neuvey and Merrill Lynch. Jay is a B2B/Enterprise Software expert with a finance background, building tools for businesses and managing large development teams for the past 16 years.

## Luke Heidecke

Luke brings over 20 years of experience advising and consulting for Global 500 clients. He was most recently go-to-market strategy and business development manager for GenAI-enabled developer tools at Amazon Web Services. There he developed and managed partner initiatives to drive adoption of services from beta stages through general availability of GenAI for coding (Amazon CodeWhisperer), and a unified software development toolchain service.

# Our Investors

Our backers include awesome communities and their founders - What we are building is bigger than us.

## Token Utility and Functionality

The \$LONG token, an ERC20 token, serves as the central medium within Belong and other partner ecosystems, facilitating a range of activities and interactions. Its primary utilities are:

### Access & Engagement

Token holders gain exclusive access to certain platform areas and events, enhancing user engagement and loyalty.

### Rewards & Incentives:

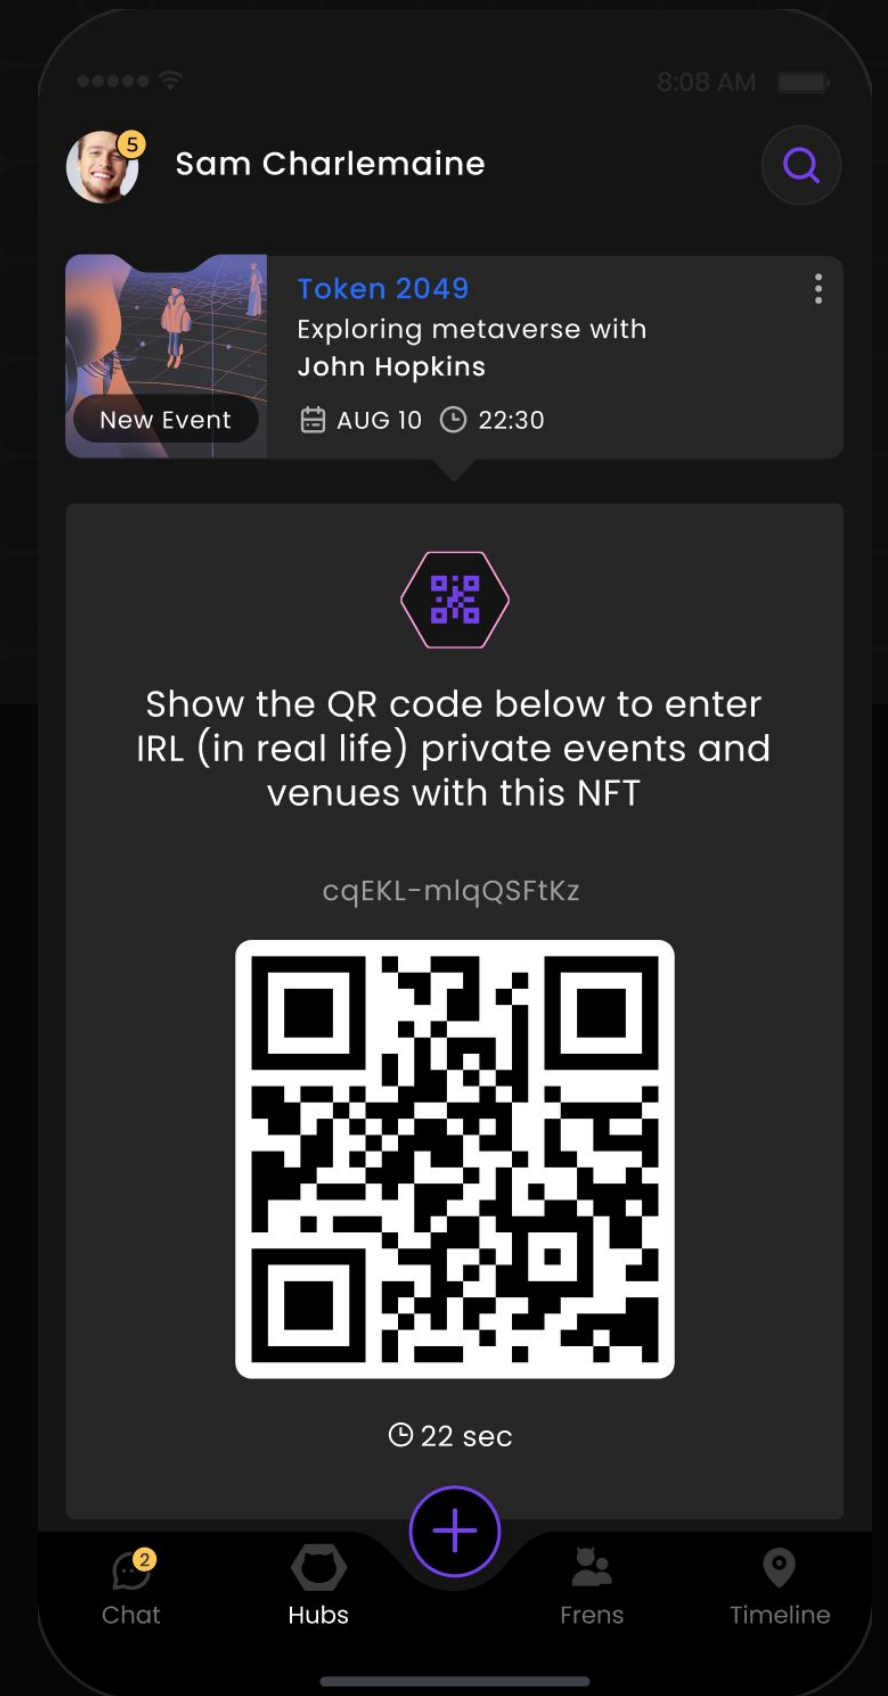

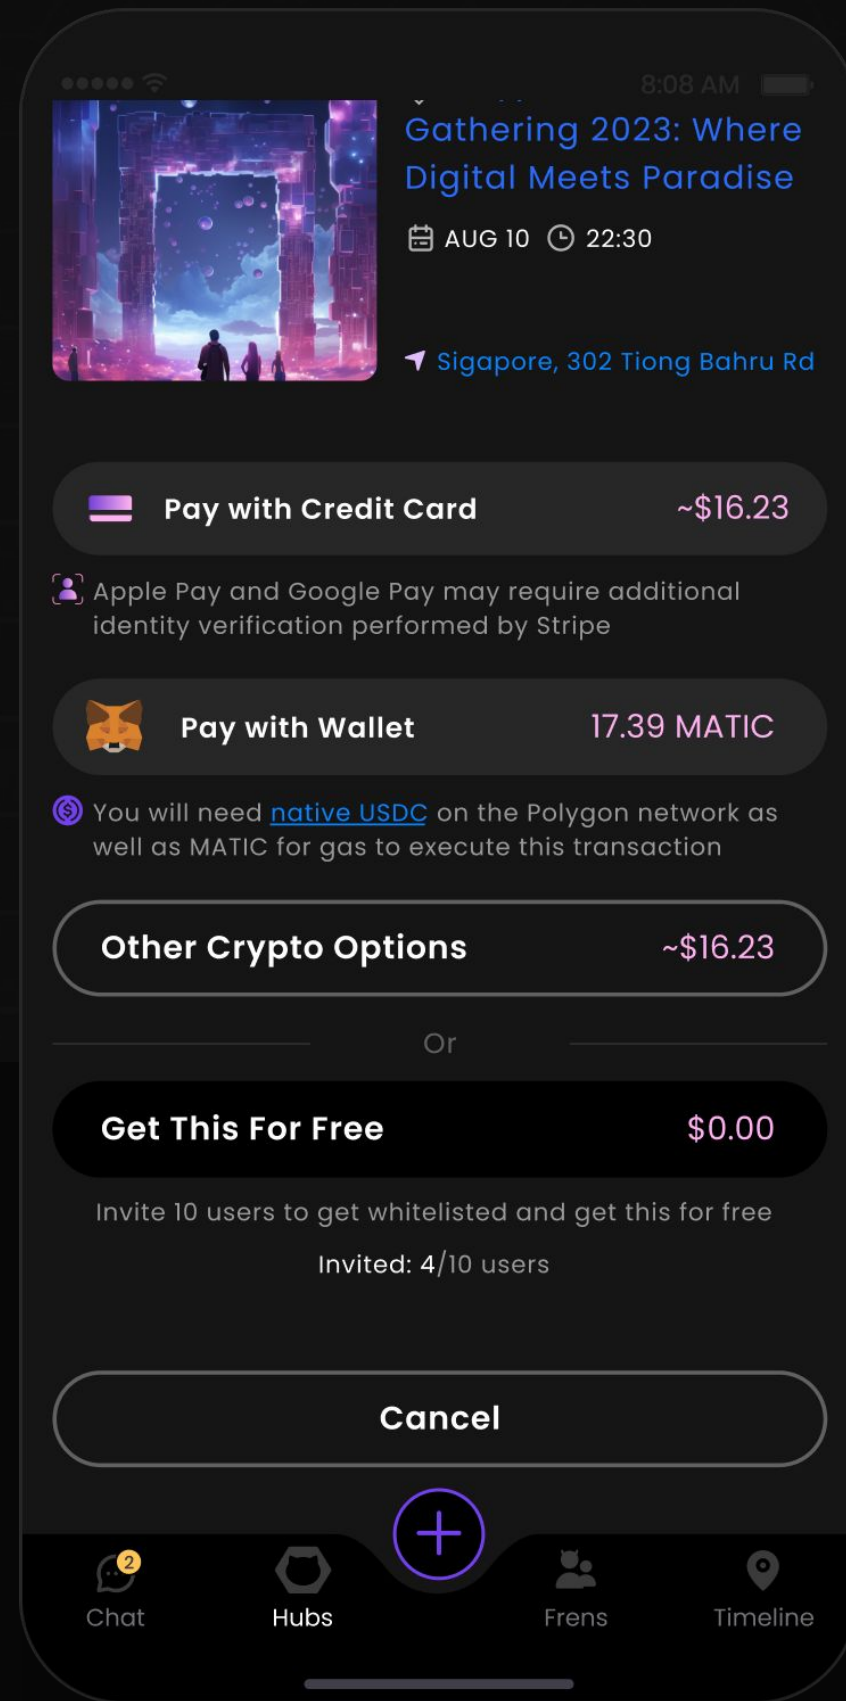

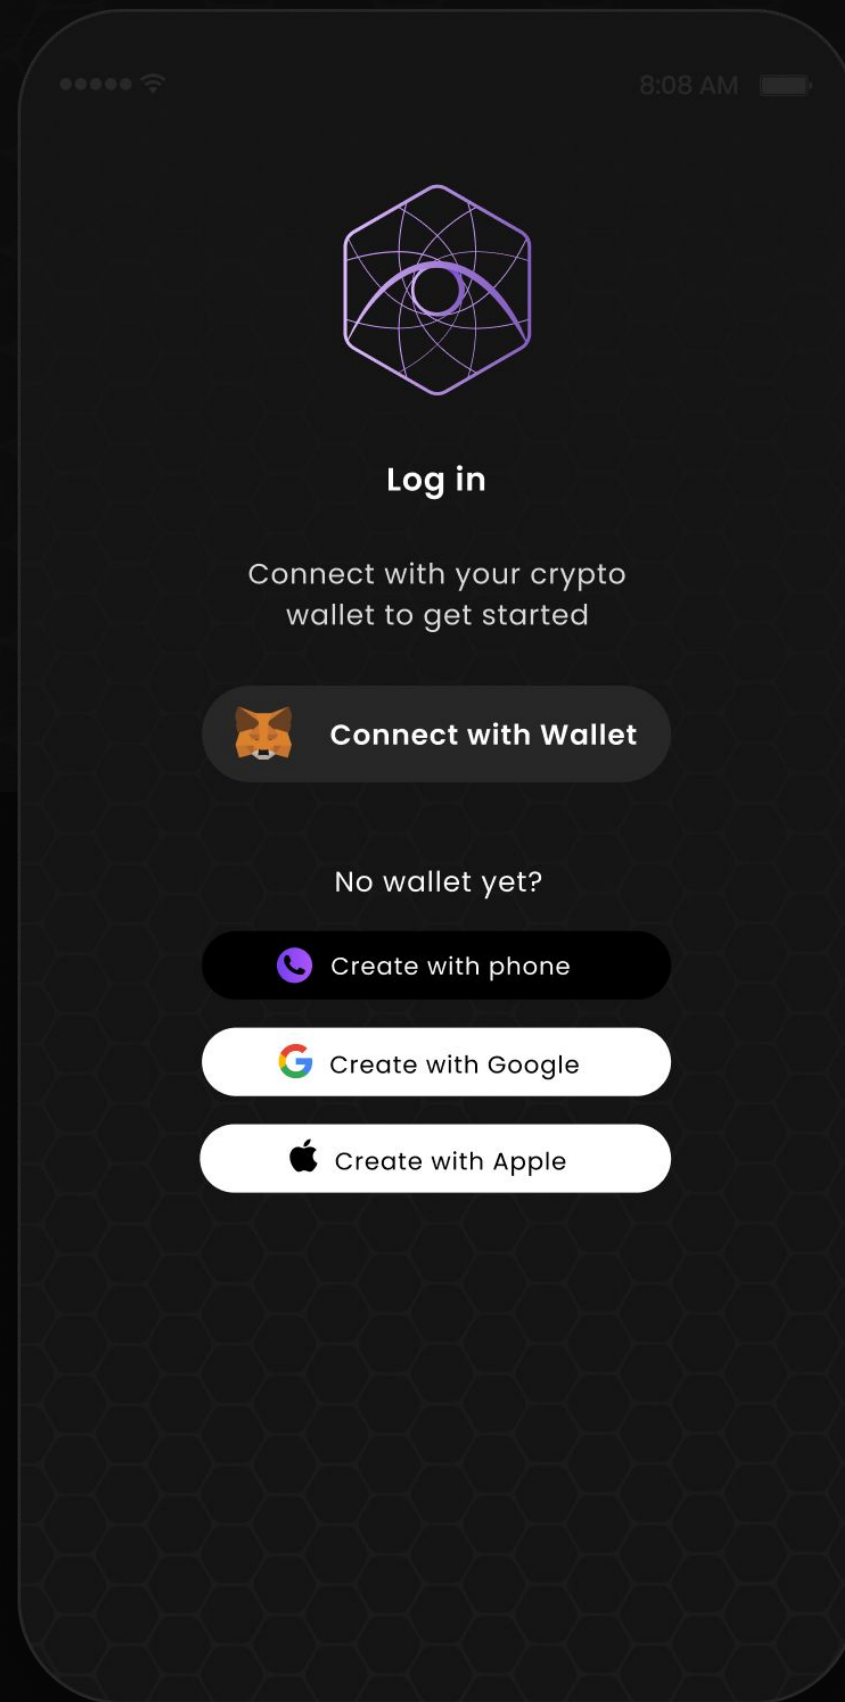

The tokenomics include a rewards system, where users earn \$LONG tokens for activities like referrals and active participation, fostering a vibrant community.

### Staking & Governance

Users can stake \$LONG tokens to participate in governance decisions, influencing the platform's direction and policies.

### Transaction Medium

\$LONG facilitates transactions within the platform, acting as a currency for various services and features.

*Thank You*
